Education

Imperial College London — London, UK
Master's Degree (M.Sc.), Design with Behaviour Science — *Sep 2025 – Sep 2026*
– Coursework: Design Psychology, Inferential & Causal Statistics, Transdisciplinary Research Methods, Design of Visual Systems

Selected Projects

Crypto Mirror × SDDS – Design System & GenUI Contract | *Self-initiated, extends MSc project* — 2026
– Rebuilt a tested data-donation prototype's design system: **106 variables in 3 token layers**, **20 components**, 4 pattern screens
– Wrote the prompts; an **AI agent built every variable and component in Figma**; reviewed its work, catching errors both ways
– Encoded 4 principles from my research (n=11) as tokens: consent owns a **reserved colour**, success and insight never share a hue
– Defined the **AI-composed screen contract**: 4 components, 7 rules, 5 **machine-checkable**; synthetic-donor test caught 3 misses

Shree – Conversation Design for a Hinglish Voice Agent | *Concept Project on Bolna* — Jun 2026 – Jul 2026
– Mapped **3 intents** for an e-commerce returns line as states with entry/exit conditions; silent identification cut inputs **10 → 3**
– Built a **19-mode failure taxonomy**, each with a computable detection signal and scripted recovery engineers can instrument
– Iterated the **system prompt** across 6 versions on live calls with **3 test users**, surfacing **3 failure modes** review missed
– Defined **3-layer evaluation**: conversation health as leading, outcomes as lagging, containment as diagnostic, not target

HelloFresh for Middle Eastern Students in London | *Imperial College London* — Sep 2025 – Dec 2025
– Directed a **qualitative & quantitative study**: diary studies, interviews across 5 countries, Qualtrics survey on cooking barriers
– Found **71%** faced shared-kitchen friction, **57%** ingredient-access gaps; synthesised **6 product lines** incl. sub-30-min meals

Work Experience

Product Designer & Researcher — London, UK
Imperial College London × Smart Data Donation Services — *May 2026 – Sep 2026*
– Owned the **design process** for a data-donation tool, stakeholder scoping to hi-fi prototypes; adopted as its **consent model**
– Lifted donation willingness **12.5% → 75%** over 4 RITE rounds & 8 think-alouds by restructuring the flow to **donation-first**
– Led **11 qualitative interviews** with crypto investors, coded via COM-B; found post-loss reflection the sole incentive to donate
– Designed **on-device identity stripping** with granular, revisable consent and a pre-donation preview of every field released

Product Designer — Bengaluru, India
AutoVRse — *Jun 2024 – Nov 2024*
– Led **0→1 B2B VR training products** for Amazon, GSK, AstraZeneca and JSW, brief to shipped module; **20+ modules**
– Amazon: swapped **2 shifts of shadowing** for a **20-min VR module** in **2 weeks**; playtest cut 3 of 8 unused steps; 30 trained
– GSK: a week of induction → **45-min browser-based 3D onboarding** of 5 business units; built on **WebGL** for day-one laptops
– AstraZeneca: designed an **MR product demo** for a launch seminar, lifting **enquiries 28%** and opening new segments
– Tested AZ's lab module with **6 lab technicians**; added a **highlight-and-confirm step** after none could tell what was selected
– JSW: designed a **VR safety induction** for a steel plant: **hazard-spotting** on a simulated furnace floor, replacing a slide deck
– Cut storyboarding **7× (35 hrs → 5 hrs)** with modular templates from recurring patterns, reused by the **cross-functional** team

Product Designer — Guwahati, India
EI Lab, IIT Guwahati — *Sep 2023 – May 2024*
– Defined the **interaction model** for Gyaandhara, India's first government VR platform: **50+ schools, 10,000+ learners**
– Testing **50+ students** found users stalled on multi-step actions; broke each into **single cued steps**, hesitation **10s → <4s**
– Rolled the pattern across 3 modules in **cross-functional** sprints, raising **unassisted completion 4.5× (20% → 90%)**
– Paired narration with on-screen text & cues for **headset-bound users**; instruction recall **7 → 20+ of 30** users per phase
– Built the **visual design system** in Figma behind 4 of 5 shipped modules, adopted as the platform's **reference framework**

Product Design Intern — Mumbai, India
Vcreatek Consulting Services — *Feb 2023 – Jul 2023*
– Audited the ChauffHER website: weak **visual hierarchy**, core offering unclear, **safety USP** (women drivers) below the fold
– Rebuilt the **IA, visual design and landing page** around that proposition with stakeholders, supporting **new client wins**

Product Design Intern — Mumbai, India
Happisips (D2C caffeine-free coffee alternatives) — *May 2022 – Nov 2022*
– Audited the **customer journey** across email and Instagram DM ordering; **no confirmation step**, fully manual status queries
– Designed a **mobile app order-confirmation flow** in Figma, handed to developers; follow-ups fell to **∼2 in 10 orders**

Skills

Product & user experience design: end-to-end ownership, user flows, customer journey mapping, wireframes to hi-fi prototypes, information architecture, design systems, visual & UI design, data visualisation, responsive web/mobile UI, accessibility, B2B & enterprise products, stakeholder management, cross-functional collaboration
AI product design: generative UI, design tokens & components for adaptive interfaces, conversational & voice UX, agent flows & states, failure taxonomies & repair states, human-AI interaction, prompt & evaluation design
Research: qualitative & quantitative (mixed-methods) research, user interviews, think-aloud & RITE usability testing, contextual inquiry, diary studies, surveys, affinity mapping, research synthesis, COM-B & behaviour-science frameworks
Tools: Figma, Claude Code, Cursor, Lovable, Claude, GPT, Hume EVI-3, Miro, Qualtrics, Adobe Creative Suite, VS Code

Additional Achievements

- Selected into the top ∼5% (3 of ∼70 participants across 3 cohorts) of a 15-day UX workshop to receive a **job offer on Evam**
- Seminar speaker at the Rotaract Club of Thane Imperial, sharing insights about modern UX practices
