EDUCATION

Imperial College London

London, UK

Master's Degree (M.Sc.), Design with Behaviour Science

Sep 2025 – Sep 2026

– Coursework: Design Psychology, Inferential & Causal Statistics, Transdisciplinary Research Methods, Design of Visual Systems

WORK EXPERIENCE

Design Researcher

London, UK

Imperial College London × Smart Data Donation Services

May 2026 – Sep 2026

- Shaped SDDS's personalised-data roadmap: stakeholders adopted my recommendations as the tool's data scope and consent model
- Led 11 semi-structured interviews with early-years retail investors, coded via affinity mapping & COM-B into 6 behaviour clusters
- Uncovered post-loss reflection as the sole incentive investors trade data for, a gap in prior research, now the core value proposition
- Lifted donation willingness from 12.5% to 75% across 4 RITE rounds & 8 think-alouds by restructuring the flow to donation-first
- Designed on-device identity stripping with granular, revisable consent and a pre-donation preview of every field released

Learning Experience Designer

Bengaluru, India

AutoVRse

Jun 2024 – Nov 2024

- Led 0→1 VR training solutions for B2B enterprise clients incl. Amazon, GSK and Duracell; securing 3 long-term partnerships
- Designed and shipped 20+ VR modules end-to-end with multimodal and language accessibility for varied industries and users
- Reduced storyboarding time 7× (35 hrs → 5 hrs) by building modular templates from recurring interaction patterns
- Prototyped narrative-led MR experiences with Unity developers & 3D artists, from concept to stakeholder sign-off

UX & Interaction Designer

Guwahati, India

EI Lab, IIT Guwahati

Sep 2023 – May 2024

- Defined the interaction model for Gyaandhara, India's first government VR platform: 50+ Assam schools, 10,000+ learners
- Testing found users stalled on multi-step actions, broke each into single cued steps, cutting hesitation from 10s to <4s
- Applied the pattern across 3 modules, raising unassisted completion 4.5× (20% → 90%) over 3 test phases with 50+ students
- Paired narration with persistent on-screen text & visual cues, instruction recall going from 7 to 20+ of 30 users per phase
- Built the design system behind 4 of 5 shipped modules, working in agile sprints with a cross-functional development team

Design Intern

Mumbai, India

Vcreatek Consulting Services

Feb 2023 – Jul 2023

- Audited the ChauffHER website and found the core offering unclear and its safety USP (women drivers) buried below the fold
- Wireframed and rebuilt the IA and landing page around that safety proposition (9/10 safety rating), supporting new client wins

UI/UX Design Intern

Mumbai, India

Happisips (D2C caffeine-free coffee alternatives)

May 2022 – Nov 2022

- Audited order placement and tracking across email and Instagram DMs; found no confirmation step and fully manual status queries
- Designed a mobile app order-confirmation flow in Figma, adopted and handed to developers, cutting follow-ups to ~2 in 10 orders

PROJECTS

AI Post-Call Companion – UI prototype | Claude Code

Sep 2026 – Present

- Designed a generative UI pattern: the agent's structured call outcome selects and fills 6 components from shared design tokens
- Set a confidence threshold on outcome mapping, so uncertain or failed calls show a Repair state, not a wrong summary

Shree – Conversation Design for a Hinglish VAI | Concept Project on Bolna

Jun 2026 – Jul 2026

- Mapped 3 intents for an e-commerce returns line; specified identification by silent retrieval, cutting caller inputs from 10 to 3
- Built a 19-mode failure taxonomy across three families, each carrying a computable detection signal and scripted recovery
- Iterated a production system prompt across 6 versions against live calls, surfacing 3 failure modes invisible to review
- Defined 3-layer evaluation metrics: conversation health as leading, outcomes as lagging, containment as diagnostic, not target

HelloFresh for Middle Eastern Students in London | Imperial College London

Sep 2025 – Dec 2025

- Directed a mixed-methods study to identify service gaps for Middle Eastern international students in London
- Conducted diary studies and interviews across 5 countries to uncover cultural and financial barriers to cooking
- Ran quantitative data analysis of a Qualtrics survey: 71% faced shared-kitchen friction, 57% struggled with ingredient access
- Synthesised insights into 6 strategic product lines, including sub-30-minute meals and kitchen-accessible recipes

SKILLS

Product & Interaction design: Interaction modelling, user flows, wireframing, journey mapping, conversational & voice UX, multimodal and human-AI interaction, data visualisation, rapid code prototyping, visual & UI design, responsive web/mobile UI, information architecture, design systems

Research methods: Qualitative and quantitative (mixed-methods) research, laddering and in-depth interviews, diary studies, contextual inquiry, surveys, think-aloud usability testing, RITE, affinity mapping, Bourdieu's semantic field mapping

Behaviour science frameworks: COM-B, PRIME, ABC, ISM, Self-Determination Theory, Intergroup Contact Theory

Tools & platforms: Figma, Miro, Qualtrics, Adobe Creative Suite, Cursor, VS Code, Lovable, Claude, GPT, Mistral, Hume EVI-3

ADDITIONAL ACHIEVEMENTS

- Selected into the top ~5% (3 of ~70 participants across 3 cohorts) of a 15-day UX workshop to receive a job offer on Evam
- Seminar speaker at the Rotaract Club of Thane Imperial, sharing insights about modern UX practices
